

# Trap

Plaster

The Simcraft Plaster Trap is a filtered drainage unit designed for use where waste water needs to be filtered to remove solid particles before the water enters the plumbing, such as medical facilities, laboratories or art rooms. The cylindrical body of the unit is handcrafted from 304 stainless steel, and features a stainless steel outlet (with copper connection included) as well as a puddle flange around the top on the outside to effectively contain water. The unit is supplied with a removable silt bucket which is perforated around the top section; when dirty water enters the unit, any solid waste particles settle in the bottom of the bucket whilst the cleaned water is allowed to overflow through the top of the bucket and down to the outlet. The bucket can then be removed so the collected waste can be disposed of separately.

## Design Features

- Cylindrical design for easy cleaning
- 1.6mm 316 grade S.S. No. 4 satin finish
- Removable Type-A bucket with handle to catch sediment waste material
- Concrete, vinyl or above floor versions
- 40, 50, 65, or 100mm inlets available
- 100mm copper elbow welded to outlet
- Fully welded construction
- Approved by the Water Corporation
- Secondary mesh strainer at outlet
- Standard size
